Current and Future Plans

Currently, I am working as a service person in fulfillment of a one-year National service program where I happen to serve as a pupil teacher in the northernmost part of Ghana Bolgatanga specifically. During this period, I have undertaken several voluntary activities specifically to reach out to the majority of the inhabitants and educate them about personal and environmental hygiene since typhoid is one disease most prevalent in that part of Ghana. I am also in the process of applying for a scholarship to study outside the country. I intend to pursue a three years master's degree program in drug engineering in the United States of America. My stay in the Region is what actually drives my pursuit of drug engineering as I intend to reach out to more people and touch more lives in the Region in the near future.

Thanks
Thomas Benson
